

top ten table solutions for your classroom.

furnware®

How do your students learn best? Sitting, standing, kneeling, or a mix of everything?

Schools around the world are transforming and classrooms are evolving from rooms filled with static desks in rows, to active places of learning that encourage movement. Places where students can transition around their space, working independently or collaborating with others.

Today's learning spaces need flexible furniture to facilitate the different learning styles of individual students and support the many activities happening in classrooms at any one time.

Here are our **top ten table solutions** to make your space flexible, adaptable and support your teaching and learning.

Switch Table System™

Our best selling table system.
This dynamic system includes five interchangeable tables of different shapes and sizes to support individual, paired, small and large group learning settings. Castors add flexibility and make it easy for students to move the tables around the classroom.

The single Switch Table offers so much flexibility: pull apart for assessment, or group six together in a collaborative circle - perfect for a senior classroom.

Paparoa Table

Undoubtedly one of our most popular teaching tables, Paparoa brings the learning to life. Teachers can facilitate small-group instruction getting face-to-face with more than one student at a time. A whiteboard surface makes the learning visible and doubles as a low-tech collaborative tool for problem-solving.

A popular table in various heights - seated or kneeling.

Standing Height Tables

💡 Top with a Whiteboard to make the table an interactive teaching and learning tool for the classroom.

A standing height table offers student choice and flexibility in any space - traditional or modern. Choose from a wide range of table-top shapes and pair with a Bodyfurn® Stool so students can stand, sit or even perch at the table. This positive movement is proven to be good for the body and mind and can help to refocus distracted students.

Connect Table System

The clever geometric shape of this table allows you to create interesting configurations to accommodate different sizes of groups. A single table can comfortably seat two students with plenty of extra table space for devices and books.

💡 Combine Connect Tables with practical Rectangle Tables for larger groups in boardroom type settings.

D and Rectangle Table System

The perfect set of tables that can deliver individual, small group and large group learning when you're on a budget. Place them in the centre of the classroom or push straight edges against the wall to create more floor space.

 Need more surface space? Keep adding rectangle tables. A very affordable and effective classroom table system.

Alpha Desks

 Take a look at the configurations you can achieve using the Alpha Desk, as recommended by Teachers Magazine.

There's plenty of desk-top space for everything students need to learn. The offset leg helps students get in and out from behind the desk easily and the rounded edges won't catch on uniforms. Ideal for independent learning or they can be grouped together.

 Combine the Alpha Desk with the ergonomic Bodyfurn® Sled Chair to give students the best opportunity for successful learning.

Freeville Table and Round Table System

 This system combines to fit in any size space including small, narrow and wide.

This flexible, functional table system combines in a variety of ways to suit the size of your learning space – small and narrow or wide and open. Create learning spaces where students are encouraged to contribute and collaborate.

Kneeler Tables

 Kneeler Tables - throw in some Cookie Pad floor cushions for added comfort.

Students of all ages like to learn on the floor. Furnware have kneeling tables in all shapes and sizes, from the Flower Table for junior spaces, to the classic Rectangular Table in whiteboard for older students.

Study Nook

 Study Nooks work for students of all ages.

Designed for students who need a quiet space and privacy in a classroom to help them concentrate or refocus. Great in classrooms and libraries, Study Nooks suit those who respond to learning in a 'cave environment'.*

*David Thornburg's 'Campfires in Cyberspace' suggests there are three specific zones to implement in a classroom to optimize learning for different student types - the "campfire", the "watering hole" and the "cave".

Tiered Learning Zone

Tiered seating with whiteboard surfaces support a learner-led competency and project-based curriculum where the learning is visible and active. In these zones, there's plenty of room for larger groups to present and debate.

 Create a tiered learning zone using Endeavour Mobile Table with Base Quarter Circle Benches and Round Star Base Tables, or Base Tables with Base Curve Couches. Complete both sets with Bodyfurn® Stools.
